Report Introduction

Draft notice

This is a very early draft of this literature review and will be subject to major change over the next month. I've marked sections that I've taken from the proposal, or ones that I'm currently uncertain of, with boxes similar to this one.

1.1 Aims and Objectives

Copied from proposal

These are still subject to change pending the feedback from my proposal.

This project aims to aid new and existing students alike while they are attending university with helpful information about the university itself, such as university societies, locations/campuses, and policies through the medium of a digital chatbot companion to converse with. Its objectives are to:

- Develop a chatbot capable of accurately answering user queries related to university buildings, policies, and societies with a minimum 95% accuracy rate.
- Conduct a thorough literature review on the surrounding topics, namely AI, LLMs and NLP.
- Create effective documentation for all stages of development, highlighting challenges faced during the process.
- Manage time effectively to ensure all project milestones are met on a consistent and regular timeframe.
- Evaluate the effectiveness of an AI assistant on university student acclimatization.

1.2 Literature Search Methodology

Uncertainty - Unfinished section

I assumed that I should include the exact search terms including special characters like asterisks as well as AND + OR queries, but I'm not sure how to best display that in this document. I'm also aware that a few of these are parts of each other (Deep learning and NLP for example) though I would surely need to research both anyway?

My literature search will be performed using multiple reputable databases for academic papers, including:

- IEEE Xplore
- Scopus / Elsevier
- Google Scholar
- BCU Online Library

By using multiple different databases to source my information from, I can ensure that any potentially relevant literature will be found. Figure 1.1 depicts how in a search for 1685 articles about employee retention strategies and turnover, only 582 (25.7%) appeared in multiple databases (Wanyama, McQuaid, and Kittler, 2022), meaning that the remaining 74.3% of articles were exclusive to the single database in which they were found, emphasising the importance of searching multiple databases.

Figure 1.1: Distribution of searched articles across databases. (Wanyama, McQuaid, and Kittler, 2022)

All searches performed will be on papers published during or after 2020, due to the constantly evolving fields my project is based on. The search terms I will use to retrieve the data I will be studying are:

- Artificial Intelligence OR AI
 - AND Ethics
 - * AND Bias
 - * AND Fairness
 - * AND Privacy
- Chatbot OR Digital assistant
- Large Language Model* OR LLM
 - AND fine tuning
- Natural Language Processing OR NLP
 - Intent recognition
 - Entity extraction
- Deep learning
- User Experience OR UX
 - AND Design
- Information retrieval

By using these specific terms that are directly relevant to the core themes of my project, I will be ensuring that I only retrieve literature that will be of crucial use in its development.

Literature Review

2.1 Themes

2.2 Review of Literature

2.2.1 Review

Check the template document because I'm not too sure if it's formatted this way.

2.2.2 Theory

Check the template document because I'm not too sure if it's formatted this way.

2.3 Summary

Appendix

Copied from proposal

This is still subject to change pending the feedback from my proposal.

3.1 Gantt Chart

Figure 3.1: A conceptual Gantt chart of a development timeline.

References and bibliographies aren't the same thing. Your references are your directly cited sources, whereas your bibliography is everything you consulted for information, even if you didn't directly cite it.
